

Log-On Software is pleased to announce

Policy-1

The tool for enforcing and handling of return-codes for DB2 SQL calls without having to change programs!

Policy-1 can:

- 👍 Allow installations to define different and STANDARD return-code handling for Batch and CICS programs for SQL calls
- 👍 Issue a WTO if the return code from the SQL call is not zero
- 👍 Replace a specific DB2 return-code by another return-code
- 👍 ABEND your Task/Program according to installation standards
- 👍 Call a subroutine for further processing of an error situation
- 👍 Support DB2 SQL calls under → TSO ,CAF ,RRSAF and CICS - WITHOUT changing your application programs
- 👍 Save writing and testing of application code, handling error situations after SQL calls
- 👍 Support new return codes (new DB2 release...) without having to change the application programs
